

Preparation of Digital Images for Projection

Workflow

If needed, change the colour mode to RGB 8bits / channel

If needed, change the colour space to sRGB IEC61966-2.1

Resize the image.

It is important to constrain proportions
(or preserve aspect ratio).

For landscape make the width 1024,height will auto-adjust.
For portrait make the height 768, the width will auto-adjust.

From the File menu, select "Save as .."

Name the file using **File Naming Specification**

Select File type as Jpeg (or Jpg).

Select high quality compression.

Select the folder where the image is to be stored.

Save the file.

The above procedure is only a general description.

The exact method will vary with the image editor used.

More detailed methods for a selection of common image editors is
shown in the Appendix.
